

Dear Ferc,

I live on a dirt rd less than a mile from the origination of the joint Williams/Cabot 30 inch transmission line THE CONSTITUTION. This compressor site is already being constructed and according to the Williams brochure this will be the ONLY compressor currently planned for the Constitution. Oddly enough, Williams used a GP-5 DEP permit submitted for a two engine compressor at this site.... GP-5's are for MINOR SOURCE EMISSIONS.

Williams did NOT display honesty or integrity towards the community in Susquehanna County when they permitted the Constitution Pipeline's WILLIAMS MIDSTREAM PLANNED CENTRAL STATION by using a GP-05 DEP permit for a two engine compressor they called the Central HP Compressor. This appears to have been a way to jump start construction for the large compressor meter station in Brooklyn on Turnpike Rd next to the Newton Hill Cemetery covertly and to subvert public participation in DEP's permtting process. GP-05 permits per Sec Krancer are for MINOR SOURCES OF AIR EMISSIONS OF LITTLE OR NO CONCERN TO THE PUBLIC. There is no doubt, the 54 acre compressor site in question is NOT going to be two engine station.....it is without a doubt the beginning of a 30 diameter TRANSMISSION line that will be a MAJOR SOURCE of air emissions noise etc.....Williams abused the GP-05 permit process.

I am opposed to any permit process that takes the public's voice away as does the GP-5. Williams has displayed a blatant disregard for my community's health and welfare by abusing the permit process. I fear they want eminent domain to ram a pipeline into our state ship all the gas from our state to whatever market brings the highest profit.....be it overseas LNG etc. I demand transparency in their plans that have already affected my life quality due to the current traffic on my dirt rd related to construction of the WILLIAMS MIDSTREAM PLANNED CENTRAL STATION,a large compressor by necessity that will also be a metering station. They have not done any environmental impact studies and are already constructing the first compressor/meter station site that will be the beginning of the Constitution Pipeline. If they are not transparent and do not display regard for human life and health, then do not grant them the certificate they seek.

Sincerely,  
Rebecca Roter
